Multi-Forms using WinForms

You will create a Windows Forms application in C# that acts as a program launcher. The main form should display a menu that lets the user choose one of several mini-programs:

- Student ID Generator
- Pet Adoption Form
- Flag Quiz
- Product Order Form

Each mini-program must be implemented as a separate form and should follow the behavior described in the flowchart. The application must validate user input, provide feedback (messages or error prompts), update interface elements (Labels, PictureBoxes, etc.), and always allow the user to return to the Main Menu after completing or canceling a task.
